

SQL Practice Questions

Based on Product and Orders Tables

Tables used: **product** and **orders**

Level 1 — Basic

1. Display all records from the **product** table.
2. Display only **product_name**, **category**, and **price** from the **product** table.
3. Find all products whose price is greater than **500**.
4. Find all products whose stock_quantity is less than 20.
5. Display all products where is_available is TRUE.
6. Find products belonging to the Electronics category.
7. Display products in descending order of price.
8. Find the maximum, minimum, and average product price.

Level 2 — Filtering & Aggregation

9. Find the total number of products in the product table.
10. Find the total available stock of all products.
11. Find the average price of products in each category.
12. Find the number of products available in each category.
13. Find categories where the average product price is greater than **1,000**.
14. Find products added after 1 January 2026.
15. Find the total quantity ordered for each product_id.

Level 3 — JOIN & Business Questions

16. Using an INNER JOIN between orders and product, display: order_id, product_name, quantity, order_date, and customer_name.
17. Find the total sales amount for each product. Hint: price × quantity.
18. Find the top 3 products by total sales amount.
19. Find customers who have placed more than one order.
20. Find products that have never been ordered. Hint: Think about using a LEFT JOIN.

Bonus Challenge

21. Find the category that generated the highest total revenue. Try combining JOIN + GROUP BY + SUM() + ORDER BY + LIMIT.

Practice Tip

Solve the questions yourself first. Focus on SELECT, WHERE, ORDER BY, aggregate functions, GROUP BY, HAVING, INNER JOIN, LEFT JOIN, and LIMIT.
